

Set Top Box (STB)

3 Step Troubleshooting Quick Reference Guide

1 TV Input Settings

- TV input must be set to the same input as what your STB is plugged into; if connected with a coax cable turn the TV to channel 3.
- Ensure the ethernet or coax cable is securely connected.

2 Reset the Set Top Box

- Press and hold the power button for about 10 seconds, until 3 lights (green, blue and red) in the centre of the set top box flash. The STB will take about 10 minutes to reset.
