How to connect a Gigacenter router from Quadro

1. Ensure that the modem you are using has working internet.
2. Take the router out of box along with power cord and Ethernet line.
3. Connect Ethernet cable to internet port on the modem and the ETH/WAN port on the router.
4. Plug in power cord to wall outlet and connect to the router.
5. Turn on the router by pushing the power button located on the back of the router.
6. Wait 10 mins for the router to update.
7. After updating, there should be 4 green lights (power, broadband, service, Wi-Fi 2.4).
8. Now you are ready for setting up Wi-Fi (wireless internet).
9. Please call 519-229-8020 to set up the router user name and password. The password must be a minimum of 8 characters.
10. Once you have talked to Quadro and they let you know that everything is set up, you should see the router name on your wireless device.
11. Open up your device and click or tap on the router name and it will ask you for your password or pin. Enter the password that you chose for the router.
12. You will now have Wi-Fi internet.
